

Professional online surveys with G3plus

The G3plus survey software offers a wide range of methodological and technical features for the professional implementation of your online surveys, from conception to evaluation.

Maximum functionality for your online surveys

G3plus is a sophisticated system for efficiently creating and managing any type of online survey.

The functional diversity of the software offers flexibility to meet all your questionnaire structures and survey design requirements.

The software has the right options for every challenge. With G3plus you can programme short internal surveys as well as large and complex survey projects. The software's user interface is simple and intuitive and guides you through all project phases.

It allows you to create online questionnaires in no time and also offers the possibility to manage your survey projects and contact respondents via an integrated mailing tool.

Advantages with G3plus

- Simple and intuitive interface
- Quick and easy questionnaire creation
- Easy import: questionnaires in text format
- No HTML programming knowledge required
- Mailing tool for participant recruitment
- Real-time display of survey results

- Export data to CSV, SPSS and Excel
- Standard user interface

Combined Competence with G3plus

Usability

- Free training and support
- Can be used without programming knowledge
- Built-in wizards and support
- Easy import of your questionnaires and translations from any text format
- Library of questions and answers
- Extensive testing features
- Support for over 50 languages
- Drag-and-drop technology
- Compatible with [RogPanel](#) und [Rog360](#)

The G3plus modules at a glance

Since 1999, Rogator AG has been developing its own software products for optimal support in all process steps. Easy-to-use user interfaces are just as much a matter for us as individual advice. All solutions are compatible with each other for a smooth workflow in your project.

ROGEditor

Client-based module for programming short, simple, as well as large and complex online surveys.

ROGManager

Web-based module to go live and manage your surveys created with RogEditor, track responses and statistics in real time and access results.

ROGMailer

Integrated mass mailing tool to create and send code-protected HTML survey invitations to defined lists of recipients.

ROGExport

Client-based module for exporting the collected data and converting it to common raw data such as CSV, XLSX or SAV.

ROGDashboar

RogManager includes a dashboard module for visualising your survey results, which can also be shared with third parties.

ROGPanel

Compatible software solution for programming and managing a survey portal with a permanently recruited pool of participants.
